Web Phone Email Extractor [Win/Mac]

What's New In?

Web Phone & Email Extractor is a useful application designed to help you find phone numbers and email addresses located on webpages. Its Plus is that it can process multiple links in one go, crawling each page to find the requested data. Extract data from multiple pages in one go Working with Web Phone & Email Extractor is pretty intuitive due to its straightforward interface and simple options. You first have to select the type of data you are looking for. It's either phone numbers or email addresses. Unfortunately, it cannot be both at the same time. The next step is to add the links you want the application to parse. You can add them manually one by one, each on a separate line but keep in mind that a list of URLs can also be imported from a DOC, DOCX or an RTF file. For your convenience, the application comes with quick link management tools and filtering options that allow you to select the URLs that match a specific content-related condition. Regex-based search of emails and phone numbers You can choose how deep the scanner should go: it can analyze just the links in the list, all the URLs it finds or all the URLs that belong to the same domain. The scan depth is customizable, which is quite useful if you are dealing with a large website. As a plus, Web Phone & Email Extractor features support for regular expressions. In other words, you can extract custom data using regular expressions to apply certain filters and rules. The found data can be saved automatically to a CSV file or you can export it manually as a CSV file or a TXT file. The program is easy to use and has a clean interface, with minimal buttons and menus. It has a fast and reliable engine, so you can easily discover hundreds of pages in a few seconds. PW-Tools.com is a useful software to crawl and scrape the web for information such as email addresses, phone numbers, addresses and much more. Web Phone & Email Extractor is an easy-to-use software application designed to help you extract phone numbers and email addresses from any of the webpages on your favorite web-based application. The software lets you search the internet for contacts you may have missed in your address book, emails or even phone numbers. It's built-in search engine crawls and downloads pages that contain phone numbers, emails, addresses or any other field and automatically parses the information into a standard data format. With the single-click power of this application, you can go through a list of contacts and grab the desired info. This application will help you get important numbers and email addresses of any website or webpage. Web Phone & Email Extractor is an ideal tool to contact people on Twitter, Facebook, LinkedIn, Instagram, Google+, Yahoo, Skype, YouTube, Viber, Telefonica, T-Mobile, etc. Its plus
