Winks. Sda is the award winning statistical package for Windows. It analyzes all the statistical data and present the data in a way that is easy to understand and make good decisions. It can perform calculations and reports on almost any type of statistic data that are usually classified as descriptive, inferential, and monitoring. There are numerous statistical functions to perform out of box that will help you analyze data and make conclusion. A wide range of charting functions is available for Graphical displays. It has wide spectrum of presentation functions to generate beautifully graphs like MS Excel, SSRS(RDL format), HTML, Word Documents. Winks SDA Features: *Can be used to analyze any type of data like counts, proportions, means, t-test, Z-test, CVA (confidence and value of the odds) *It can perform calculations for categorical data like counts of categories *Types of confidence intervals, reliable intervals and hypothesis testing *It performs monitoring of a parameter *It has a wide range of charting functions for Graphical displays. It can generate graphs like MS Excel, SSRS(RDL format), HTML, Word Documents *Importing data from various sources like excel spreadsheets, CSV documents, text files and Microsoft Access databases (available through MFC) *Manual entry of raw data of the variables in a table format for easy exporting to any other software for further analysis *In recent version, export to RDL format *Easy to learn and easy to use Winks SDA license: It is FREE SOFTWARE. You don't need to purchase any license to use this product. Winks SDA supports all the above operating systems including Windows XP, 7, Vista, 8, 8.1, 10. Windows XP Effective Date: 01/10/2016 SDA 4.0 Effective Date: 04/30/2010 Winks SDA version 4.0 provides a number of new features with the help of a simple to use and user-friendly interface. This latest release comes with a lot of new features like customizations, pre-built reports for analysis, correlation analysis and more. More importantly, new graphs, charts and bar graphs have been added to its library, which makes Winks SDA an all-in-one tool that can do it all. Winks SDA Features: * Can perform calculations for categorical data like counts of categories * It can perform monitoring of a

"WINKS" stands for "Windows Instant Numerical Kwikstat". It is a mathematical package that analyzes data, graphs and outputs tables that can be easily understood. Besides, Winks offers a solid set of numerical operations that can be used for different types of calculations. Winks also has a financial module that can read and organize financial data, including stocks, bonds, real estate, commodities and any other type of financial investment. In addition to this, it offers a wide variety of charts, graph types and mathematical functions you can use for your own financial analysis. The software allows you to track the movement of financial assets, as well as their sensitivity to certain factors. In addition, you can use it to add columnar data to your finances, such as your income and expenses. This type of information is mainly used to calculate your net income. Winks is user-friendly, and you don't need to be a statistician or a mathematician to use it. The application has been designed to make this possible, thus enabling you to perform tasks such as calculating the variance, standard deviation, mean, median, geometric mean, extreme value, kurtosis and the cumulative distribution function. Advantages of Winks (WinKwikStats): With Winks, you can perform a wide variety of operations on a wide range of data types, including text, numbers, dates, times and stock prices. Data can be either cell-based or columnar. Most of the operations are made with a simple click of your mouse. Besides, the program is easy to use, hence enabling even novices to make appropriate decisions on the data, and manipulate them the way they deem fit. Winks can read and organize financial data, including stocks, bonds, real estate and any other type of financial investment. The application can track the movement of these assets, as well as their sensitivity to certain factors. The tools available in the financial module are capable of calculating many different types of numbers: the mean, variance, standard deviation, minimum, maximum, geometric mean, first quartile, third quartile, minimum and maximum, kurtosis and cumulative distribution function. In addition, Winks also offers a wide variety of graphs and charts, which can be used for your own financial analysis. Winks is user-friendly, and you don't need to be a statistician or a mathematician to use it. The application has been designed to make this possible,

WINKS SDA (Windows Kwikstat) is an application that analyzes all of this information for you, using a wide variety of statistical procedures that aim to properly explain the results and even generate graphs to help you better visualize the data. In addition, it can also interpret the conclusions and allows you to manually enter your own data into a familiar spreadsheet format. In case the information is stored in another document, the utility enables you to import a wide variety of files and retrieve the values from them, while also arranging them in table form for your convenience. The supported formats include Microsoft Excel spreadsheets, plain text files

and CSV documents. Perform a variety of statistical calculations The main purpose of the application is to help you make sense of your data, as well as interpret various statistical information. To that effect, WINKS SDA (Windows Kwikstat) comes with a wide range of calculations and operations you can perform on the data. Among these, you can find descriptive statistics, confidence intervals and crosstabulations, all of which aim to synthesize useful information from albeit confusing values and statistical data. Furthermore, the utility can generate a wide array of graphs and charts based on the presented data, which can be used in presentations or for studying purposes, since they are much less difficult to follow than plain text information. You can choose between a multitude of pie and bar charts, histograms and even correlation matrices. WINKS SDA (Windows Kwikstat) Features Import, analyze and interpret data from spreadsheets, CSV files or even plain text documents. Perform a large array of operations on the data such as descriptive statistics, confidence intervals, crosstabs, correlation analysis, and much more. Generate a wide variety of graphs and charts to make data presentation and exploratory studies easier. Display statistical data and output the conclusions and their confidence intervals automatically. Include various graphs and charts and even create your own format. Perform statistical operations on many files at once. Work with Excel spreadsheets. For more information, go to Wink Software. The Types of Data you Can Analyze The utility is able to analyze a multitude of data types, from simple values to more complex information. For instance, it is capable of dealing with tabular data and can analyze values either as frequencies (counts) or percentages. This category of information includes logical facts (true or false) such as demographics, phone
