Foundation Learning Guide (CCNP Collaboration Exam 300-070
CIPTV1) by .Q: VBA, Word 2010 Help, Containing Tables in a Module I
have an issue I need help with. I am using a Table Module from a
tutorial that the instructor put together. I would like to make the Table
class and design my own, but it won't let me use the Table object. I
keep getting an error stating "Object variable or With block variable
not set". I've tried setting up the class as an array and making it a

local variable, and then change the object code to no avail. Any help would be greatly appreciated. I am new to this, so sorry for the basic question. Sub addTable() 'Add a table in the last row of the active document '*****
 ***** Dim tab As Table Dim lastTable As Long lastTable = ActiveDocument.Tables.Count Set tab = ActiveDocument.Tables.Add(Now(), Range:=ActiveDocument.Tables(lastTable) _ .Rows.Count) tab.Border.Width = InchesToPoints(0.25) tab.Rows.NumberFormat = "@" tab.Width = InchesToPoints(6) 'Allow deletion of whole table tab.delete End Sub '*****
 ***** Sub addText() 'Add a paragraph in the last column of the active document '*****
 ***** Dim tab As Table Dim lastTable As Long lastTable = ActiveDocument.Tables.Count Set tab = ActiveDocument.Tables(lastTable) ActiveDocument.Tables(lastTable).Columns.NumberFormat = "@" ActiveDocument.Tables(lastTable).Rows(1).Paragraphs(1).Range.InsertParagraphAfter ActiveDocument.Tables(lastTable).Rows(1).Paragraphs(1).Range.Text = Array("Test") End Sub '*****
 ***** Sub

The free sample download is available for download by the following link: Implementing Cisco IP Telephony and Video, Part 1 (CIPTV1) Foundation Learning Guide (CCNP Collaboration Exam 300-070 CIPTV1) Or you can right click on the link and select 'Save Target As' to download the file to your hard drive directly. The file is 2.05MB in size and will be saved to your Downloads folder. Anyone using a Mac running OS 10.7 or a Mac Pro running OS 10.8, you can download the file directly from here. Cisco Implementation Guide What is Interconnected Voice over IP? The Interconnected Voice over IP (Cisco IP Telephony) delivers high-quality IP telephony by linking existing telephony applications to the IP network. This enables services such as voice, video, messaging, and fax to be integrated into an enterprise IT infrastructure. Cisco IP Telephony offers converged, all-IP voice, video, messaging, and fax services, allowing these services to be supported from one set of network infrastructure.

The Cisco IP Telephony solution builds on existing telephony infrastructures, such as ISDN, cellular, and VoIP. Cisco IP Telephony can be implemented using two architectures: Evolved IP Networking Cisco IOS-based features are used to provide telephony services by using existing telephony infrastructure and deployed devices. Cisco IOS based features such as NAT, NAT-T, and IPSEC encapsulation are used to support several telephony services such as Cisco IP Telephony, Web RTC-P, Cisco Multimedia Gateway, and Cisco Unified Media Server. Cisco IOS features can be used to support advanced services, such as Cisco Unified Communications Manager 2007, Cisco Unified Communications Manager 2008, Cisco Unified Communications Manager 2010, and other enhanced telephony services. Cisco IP Telephony is supported over a variety of connections, such as Asymmetric Digital Subscriber Line (ADSL), Symmetric Digital Subscriber Line (SDSL), Integrated Services Digital Network (ISDN), Global System for Mobile Communications (GSM), Universal Mobile Telecommunications System (UMTS), General Packet
