More than 100,000 people in the region have been cut off by the ice and snow. Many are in danger of losing their homes. The steep ridgelines are impassable for those who are not suited for icy conditions. Rescue crews are unable to reach the stranded people. The natural defense of the earth's climate has been altered. The earth is now less healthy. This is a danger to all life on the planet. Vacant commercial properties are threatening some small businesses. Some will be forced to close. The mountain flora is at risk. Most will not bear fruit again in the years to come. Government orders have been imposed on people who live along the Blue Ridge Parkway. As these orders are enforced, a strong group of people protesting the orders has formed. The impasse has been discussed, but no solution has yet been presented. The best approach, until then, is to respect each other. Richard L. Anderson Smith Mountain Lake Read more Commentary.Grapes in containers such as containers for wine are commonly stored in various sizes and shapes in individual bins. In order to facilitate emptying these containers it is desirable to have a suitable mechanism for loosening the contents of the container and to dispense them in a desired manner. Such dispensing apparatus is known and available in many embodiments. For example, a known apparatus comprises a rotating screw conveyor having a plurality of augers which are spaced about the periphery of the conveyor. Such an apparatus is illustrated in FIGS. 1-6, which show a generally cylindrical container for holding therein a plurality of cylindrical bags of grapes. The apparatus is disclosed in a patent issued to Bolichar et al. (U.S. Pat. No. 5,000,492). While such a conveyor system has been found to work well with cylindrical containers, its usefulness may be limited by the geometry of the container. A special conveyor is needed for each shape and size of a container. For example, for a container shaped like the one shown in FIG. 1 having a narrow end 12 (FIG. 2) or the one shown in FIG. 3
